Prepare both a summary paragraph and a general description of the resource and its various elements as it exists today.

The frame house is a two-story gable front structure with a rectangular plan on a high stone foundation. The structure is three-bays by three-bays and has a full-length, one-story front porch. The narrowness of the main facade and the height of the structure due to its high stone foundation give the structure an overall effect that is sharply vertical. The main facade is symmetrically arranged with a central entrance. This structure appears to date from the late 19th century.

The property is located on the north side of Sandy Hook Road, approximately .15 mile west of Clark Road in Sandy Hook. The structure is built into a slight slope in the ground and has a high stone foundation. The main facade faces south.

The two-story structure is constructed of frame covered in an asphalt siding imitating block. The main facade has a gable front with wood ornamentation on the gable and on the full-length, one-story front porch. The front porch has a long set of stairs rising in the center in front of the high stone foundation. The porch is supported by wood posts covered in asphalt siding. The porch has a shed roof, boxed cornice, brackets with ornamental pendants on the outer corners, chamfered posts, and a stick railing. The house has a central entrance with two-over-two sash windows in the outer bays. One-over-one sash windows are in the outer bays of the second story. The house has corner boards and gable ends have ornamentation at the corner. The sides of the house have window sash similar to that found on the main facade. The gable roof is covered in sheet metal.
